Derma 2.0®

Preparation for Needling D 2.0® treatments:

1. Prepare all the necessary materials;
2. Remove all traces of make-up preferably using micellar water that does not leave oily residues.

Cleanse with a foaming detergent chosen according to the type of skin to be treated (DERMA-HYDRATING MOUSSE or DERMA-PURIFYING MOUSSE)

3. Disinfect the area to be treated using non-sterile gauze. In order to carry out a pre-treatment exfoliation, it is possible to proceed mechanically or chemically:

3a. IF Mechanical: application of DERMA-SCRUB FACE or DERMA-SCRUB BODY depending on the treated area. After application, rinse the treated area thoroughly;

3b. IF Chemical: degrease the area to be treated with DEGREASING PRE-TREATMENT SOLUTION in order to acidify the area to be treated (thus optimize the penetration of the chemical peeling chosen according to the type of imperfection to be treated).

4. Apply and hold the chemical peel in place until active peeling stage is completed, client will have redness and tingling sensation (10-15min)

● DERMA-BIO PEELING: Flaccidity, lack of firmness, chrono aging fine wrinkles

5. Once peeling is complete (10-15min), neutralise the skin for twice the peeling time with the NEUTRALIZING POST PEELING SOLUTION

Needling treatment D 2.0®

6. Select the right sterile and disposable module according to the area to be treated (12 needles recommended, nano for under the eyes)

7. Select the DERMA 2.0 COCKTAIL depending on the main imperfection to be treated and aspirate the contents with a syringe: This can be done using a drawing up needle, which is placed into the bung in the vial, drawing up the solution into a 1 or 2ml empty syringe.

Next take off the drawing up needle and use the syringe to dispense the product onto the areas to be treated.

● DERMA-BIO COCKTAIL: Complete Biorevitalization

● DERMA-HYDRATING COCKTAIL: Lack of Hydration

- DERMA-LIFTING COCKTAIL: Dynamic wrinkles, lifting effect
- DERMA-REPAIR COCKTAIL: Scars, post acne scars, stretch marks (body)
- DERMA-WHITENING COCKTAIL: Dark spots, post inflammatory hyperpigmentation, melasma, chloasma, senile, lentigo, solar lentigo
- DERMA-FIRMING COCKTAIL: Loss of tone and firmness
- DERMA-CELU COCKTAIL: Cellulite, liquid retention

8. Proceed with needling procedure accordingly with your technique (we suggest the minimum needles depth in order to achieve very light bleeding and uniform redness throughout the area);

9. End Point: there are no established times and standard depths. They must be evaluated during the treatment:

Needling Post-Treatment D 2.0®

a) Face:

10a. At the end of the treatment, do not dab or disinfect the treated area, but apply a fine layer of DERMA-REGEN MASK or nice aftercare cream such as Stayve Repair Cream.

Promote the reparative and re-epithelizing process, as well as the absorption of remaining mix of cocktails;

11a. After the absorption of the DERMA-REGEN MASK, or CREAM (optional)

FOR THOSE WITH THE DERMA ELECTRA MACHINE THIS IS WHERE YOU WOULD USE THE OTHER HANDLES.

Proceed with an electroporation or ultrasound for about 2 minutes at low intensity (about 10-15% of the maximum power), using any residue of the previously used cocktail;

12a. Apply the DERMA-SUN 50+ SUNSCREEN.

13a. After the session, avoid sun exposure, sauna, aggressive cleansers and aggressive cosmetics for at least 48 hours post procedure.

b) Body:

13b. Proceed with an electroporation or radiofrequency of about 2 minutes at low intensity (about 10-15% of the maximum power) using any residue of the previously used cocktail.

14b. Apply the DERMA-REGEN MASK and wrap the treated area with cellophane in order to further

promote the absorption of functional substances and also avoid friction with clothing.

15b. After the session, avoid sun exposure, sauna, aggressive cleansers and cosmetics for at least 48 hours after the procedure.
